CURVED

NEW AND IMPROVED VISIBILITY COLLECTION HIVIS EXTREME

Wenaas' visibility clothing HiVis Extreme has been developed in collaboration with those who work in the construction industry. This in combination with our own experience and competence, has made it possible to develop an ergonomic clothing where 4-way stretch for good mobility when wearing the garments has been in focus.

We have thought of all the details that help to give the user the optimal mobility without compromising functionality, fabric quality and color reproduction.

HiVis Extreme - the collection where you can lift, sit, stretch or twist as you wear and the workwear will not restrict your movement.

HIVIS EXTREME CURVED 6-9

HIVIS EXTREME 10-19

ICON 20-31

ACCESSORIES 32-33

CO-CERTIFICATION 34-36

NEW WORKWEAR *HIVIS extreme*

Work jacket with ergonomic and narrow fit. The main fabric is 4-way stretch. This makes the jacket comfortable, as well as easy to move in. Shaped sleeves with durable elbow areas and ventilation under the arms.

Trousers where the main fabric is in a 4-way stretch that provides optimal moveability. The fit shape is narrow and ergonomically designed - which makes it very comfortable.

HOW TO CHECK THE STRETCH CORRECT?

1. Lay the fabric of the product so that the weave in the fabric is vertical / horizontal.
2. Check if the fabric extends horizontally
3. Check if the fabric extends vertically

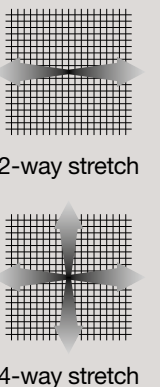

Note: If you stretch from an angle, all fabrics have stretch in the weave.

2-way stretch: Has only one stretch. The fabric has elastane or other stretch in the composition. Often this stretch lies horizontally

on the garment.

4-way stretch: Has stretch two directions. The fabric has elastane or other stretch in the composition.

Often the stretch is better one of the directions - often horizontal on the garment.

4-way stretch

CURVED

- ergonomic garments for women

The curved garments have their own design that is different from the men's/unisex models with curving and flattering cuts that highlight the female shape. 4-way stretch is very suitable for garments with a feminine shape. The women's garments have the same functions which we have on the men's / unisex models.

HiVis extreme

Fabric and qualities

It has been important for us to choose the right fabrics for this new collection. We have thought about weight, weaving, composition and qualities.

For HiVis Extreme we have found the best combination of 4-way stretch and fabric with very good qualities when it comes to reproducing color. Our 4-way stretch is experienced not as cold on cold days such as stretch can often be experienced due to large proportions of synthetic materials.

4-way stretch can also feel quickly clammy. On our models, we have taken this into account by adapting correct weaving and thickness of the fabrics. We have also facilitated for ventilation on models with a high proportion of synthetic fibers so that air will circulate.

Narrow fit and segmented tapes

The HiVis Extreme models have a narrow and modern look. The collection has segmented reflective tapes that do not just looks good, but also support the stretch in the garment to easily stretch and not be prevented from doing that.

Reverse coil zippers without metal. The zipper girders have zipper protector at the end where the grider can be hidden when the zipper is closed.

Reinforcement on wear and tear areas such as elbow, knee and hanging pockets.

Segmented reflective tapes for better stretch and mobility. Possibility to extend the trousers by up to 5 cm. Button to adjust leg width.

Specially adapted waistband with elevation behind. Wide belt strap which contributes to the belt sits where it should.

0-48335-10210 HIVIZ MENS STRETCHJACKET

A comfortable and slim model with an ergonomically fit, and good mobility. SPACER INTERMEDIATE - NEW TECHNOLOGY

The Spacer intermediate layer uses new technology that combines extra insulation with low weight. With Spacer technology, we have managed to create a material that maintains the best properties of wool, but with even greater insulation. Physiological laboratory tests at SINTEF in Trondheim show that the Spacer intermediate layer weighs less, but provides as good or better insulation than other, heavier materials.

DEVOLD SPIRIT BALACLAVA WP

The winter can be challenging for those who work outside in cold and wet climates. The workwear need to keep you warm and protect you. Use 3-layer principle with wool inside, an intermediate garment and warm outerwear. Then you can easily regulate the temperature by take off or put on garments in relation to body temperature and outdoor climate.

KNEEPAD STANDARD

0-26005-0-98

The kneepad has upgraded material that protects the knee better and has longer durability. The knee pad are equipped with text informing you that the kneepad shall be placed with cushion against the knee (this side towards knee). If placed the wrong way they will not protect the knee sufficiently and quickly wear down. Width 150 mm, height 198 mm, thickness 19mm.

COLOR	98 Assorted
SIZE	One Size
MATERIAL	Ethylene-vinyl acetate (EVA)

🧦

KNEEPAD

0-26006-0-98

Kneepads with additional protection, comfort and elasticity. Originally form resumes quickly. The kneepad has a good insulating capacity against cold floors, and high penetration against rough and uneven surface. The user will then be able to perform their work with greater comfort over an extended period. The kneepad has a long lifespan, it is certified with Wenaas' own trouser range, and is highly recommended. 160x245 mm. 20,5 mm thickness.

New requirements to be seen when wearing workwear

In many workplaces, safety and visibility are a very important part of the work to reduce occupational accidents. That is why we develop security garment solutions that will protect you from head to toe. Our workwear and protective equipment make you both safe and visible, so you can fully concentrate on your job.

EN ISO 20471 – High visibility clothing

The standard specifies requirements and test methods for visibility clothing, which will make the user visible in all high-risk situations, regardless of lighting conditions.

DESIGN REQUIREMENTS

The standard requires that Hi-Vis workwear must be designed in a unique manner. This will take into account the placement of reflective and fluorescent material. The requirements depend on which parts of the body the garment is to cover (torso, torso and arms only, torso and legs, legs only, or garments that cover both torso, arms and legs). Reflective and fluorescent material must be evenly used on the front and back of the garment, with a maximum deviation of + 10%.

REQUIREMENTS FOR TEXTILES

The requirement for the fluorescent fabric is that it must retain its fluorescent qualities even after a certain number of washing cycles. For textiles in contrasting color, there is a requirement for color authenticity. For the reflective tape material, it is a requirement that the reflective tapes are retained even after washing.

Minimum area per garment for fluorescent textile and reflective material, measured in m².

Textile	Cl.3	Cl.2	Cl.1
Fluorescent material	0,80	0,50	0,14
Reflective material	0,20	0,13	0,10

We protect our customers most important resource: THE PEOPLE

Safety during work is the most important thing we can provide. We protect the most valuable thing we have - life. We know that choosing the right workwear for the right job is essential to saving life and reduce injuries if an accident happens. If you are exposed to several different dangers during a work operation, you should choose garments that are multinorm certified.
