

Footwear

2024

TOGETHER WE TAKE NEW STEPS

Choose protective footwear from someone who knows how it is to walk with your shoes.

The requirements to protective footwear are as complex as the properties required of them. Protective footwear must include cushioning, ensure excellent slip resistance properties, stability and support for the rest of the body. They must also protect against the outer risk factors that require protective footwear.

Work shoes must retain all these properties over time, even with prolonged and heavy use.

As a direct supplier of work shoes, we are in constant contact both with professional customers, HSE employees and those who use our footwear. We take feedback into consideration when developing the products and the goal is always optimal protection and comfort.

That's why we don't necessarily adhere to the standard requirements for work shoes, but exceed the requirements both in terms of shock absorption and slip resistance. We make lasts adapted to Nordic feet and use lightweight toe caps that provide excellent protection, at the same time as leaving room to move the toes freely. We want all our customers to wear footwear that fits, which is why we provide footwear with Work Comfort EVO insoles.

Choose from a wide range of work shoes within our own brand Wenaas and from suppliers where we have assured the quality: Because we know what it's like to walk in your shoes.

BERSERK

Berserk shoes combine the best of technology with the highest quality materials. The collection is made for rough use - is well suited for sectors such as oil and gas, heavy industry and building and construction.

The models in Berserk are very flexible and energy-saving when walking, which you can quickly notice when you wear the safety shoes for 8 hours or more during a workday.

Berserk's history goes back to 1887, when it was founded as Kristiansunds Oljekledefabrikk, while it was taken over by Wenaas in 1997. We are now re-establishing the trademark Berserk. Our powerful shoe collection is named Berserk.

ENERGY RECOVERY

Inner glass fibre toe cap

Contender

HDry waterproof membrane is our water proof system used in the Berserk collection. Our membrane works as a sock directly laminated on the leather.

There are no seams in the sock that create small holes in the membrane and therefore no leakage. This way of attaching the sock ensures that no bumps or creases are caused by the membrane. It also ensures that damp is not accumulated between the lining and outer material, which is often the case with other technologies.

Dry feet during the entire workday!

Our demonstration shows how HDry keeps the damp outside, while damp and heat is released from the shoes, in comparison to other protective shoes in which absorbed moisture remains accumulated between the outer sole and inner material.

HDry system

Other technologies

RE:bound
ENERGY RECOVERY

ReBounce provides a unique balance between energy absorption (cushioning) and energy return in the shoe's sole.

During the development of the Berserk collection, we have focused on comfort. Safety shoes are probably the footwear you use the longest during a day and should therefore be made of highest quality to protect your feet and prevent knee and back problems.

We have used a material known as ReBounce in the heel counter for shoes in the Berserk collection.

In laboratory tests carried out by Ricotest on behalf of DIN 53512, ReBounce's score was on par with well-known brands for its comfortable soles.

We have done everything we could to ensure that this collection becomes your favourite while working.

Contender glass fibre toe cap is made of strong glass fibre and is 50% lighter than the traditional steel toe cap.

It has excellent corrosion resistance and electrical isolation, in addition to great heat and cold isolation. The compression tests comprise all global national safety standards. The thickness is also one of the thinnest in the market, at the same time as adhering to safety and all standards.

puncture block

Our Puncture Block midsole is soft and flexible.

This means that your foot spends less energy when walking. This sole has no hard surfaces between the PU outer sole and the insole. Nevertheless, your foot remains protected against nails and sharp objects that can perforate the outer sole.

The sole is sustainable and made from environmentally friendly material.

THE SOLE

- AN IMPORTANT COMPONENT OF HIGH-QUALITY FOOTWEAR

Have you ever considered how important the soles in your shoes are for a comfortable workday? The soles have various functions. The insole provides excellent support, good cushioning, contributes to maintaining the appropriate temperature, wicks moisture, and –not least– gives the feet a comfortable footbed.

Work Comfort EVO sole environmentally friendly insole.

In addition to all the sole's functions and properties, we have also kept the environment in mind. Our Work Comfort EVO insole, which is included in all Wenaas protective shoes and boots, is one of the market's most environmentally friendly insole. The sole is made from recycled material. The packaging is made from recyclable cardboard. The cardboard packaging can be recycled.

Recycled PET

The insole is made from PET, which is a polyester material made from recycled bottles and other polyester waste.

Moisture-wicking and airy

The sole ensures that the air circulates inside the shoe. The insole has highly absorbent and breathable properties, which make your feet feel dry and fresh.

Dries quickly

The sole dries quickly after the workday. The sole also has anti-bacterial properties that neutralise bacteria and remove smells.

Lightweight

The sole is lightweight and does not add any considerable weight to the shoe.

ESD (anti-static insole)

Work Comfort EVO insole is antistatic. Static electricity occurs when non-leading materials such as the shoe sole and the floor come into contact. The static electricity can accumulate in the body, and electric shocks can occur. Soles with anti-static properties contribute to reducing the voltage that occurs.

How does the sole help prevent tired feet?

- The sole is stabilised to provide the foot with excellent arch support.
- Extra thickness in the toe area makes the feet less tired.
- The right drop: Not only is the right drop important in running shoes, the protective footwear that you wear during eight hours each day must be as comfortable as possible.

The drop is the difference in the shoe's sole from the ball to the heel and is important to give the body the right angle and balance. Work Comfort EVO has a drop adapted for use in safety shoes used for many hours every day.

**BOOT BERSERK BALDER****0-1420-1101-10**

ESD-approved, water resistant and breathable boots in a modern design, lace system with smart tightening mechanism, full grain leather upper and light and soft rubber/PU outsole. Very comfortable boots with excellent anti-slip properties as well as energy absorption and return.

FORMA

The protective shoe collection consists of models in a conventional design with materials of the utmost quality. The safety shoes look like casual shoes.

Forma is a well-known shoe brand founded in 1906, when Th. Svendsen shoe factory was established and since then taken over by Wenaas in 1999. Forma was Norway's leading shoe manufacturer and the first company to produce protective footwear. The factory was the first in the world to produce a soft nail sole and was also awarded the standard "Good Design". We have now re-established the brand Forma.

A classic ankle boot with an American design

A great American-style boot in grained Italian leather. Soft and comfortable sole with a metal-free nail sole and a soft edge at the top makes this shoe an instant favourite. Slip resistant rubber outer sole and good ankle support.

Bakken – with "pull on"-loop.

HDry water-proof system. Membrane "sock" inside the boot that ensures that you can't feel the seams and parts of the boot, thus improving the level of comfort. You are guaranteed dry feet with the sock, which ensures that no humidity is kept between the inner and outer material, and no seams prevent water from seeping in.

ANKLE BOOT FORMA HIBERNIA

0-6060-0-10

Ankle boots in a traditional design with a grained leather upper. The ankle boots have an iconic and flexible outer sole with good anti-slip properties and arch support, toe cap and soft puncture resistant mid-sole.

COLOR 10 Black
SIZE 36-48

MATERIAL Upper material: Full grain leather. Outer sole: Rubber/PU. Puncture resistant mid-sole: Soft, metal-free. Lining: 3D Air mesh. Protective toe cap: Aluminium.

VERNER

We have re-established the brand Verner. Verner was originally founded as Møre shoe factory in 1918 and was taken over by Wenaas in 2002. Lightweight and quality materials were important when developing this collection. The collection consists of models suitable for work in service industries, warehouses and the craft industry.

This shoe collection puts the sole centre stage!

Our sporty protective shoe collection, Verner, consists of five different models. Verner Stealth, Phantom S3 and Virgo S1P have a specially developed PU sole, which is particularly well suited for slippery floors. The outer sole has a big contact surface and good grip on wet and smooth floors.

The sole performed very well on the slip safety test on the new EN 20345 standard.

Outsole with good slip resistance properties

Soft metal-free puncture resistance

Side mounted quick lacing system

Removable Work Comfort EVO insole

Ventilated panel on both sides

Soft and metal-free toe cap and nail tread protection

PANACEA

The Panacea - safety shoe collection has been developed to meet your requirements for both safety and comfort. We have combined advanced technology and first-class materials to give you safety shoes with a tough and modern look, perfect for both work and leisure.

The collection consists of low shoes, ankle boots and boots made of full grain LWG certified leather. In addition to looking good, the leather is durable and produced in an environmentally friendly way.

From the Panacea range, you can choose between quick-lock models, Challenger Zip, for ease of use or lacing for extra adjustability. The Panacea boot has both lacing and a side zipper, so you can adjust the fit to your foot and ankle. The collection even includes a "pull-on" boot.

The Vibram outsole is designed to give you maximum grip so you can feel confident wherever you go and with the fiberglass toe cap you can be sure your feet are protected from falling objects. In addition, there is a soft puncture resistant mid-sole.

in the shoe collection that gives you a secure sole against penetration while not preventing your foot from easily rolling over the ground when you walk.

For increased comfort, Panacea safety shoes have a 3D mesh lining that provides good moisture absorption, so that your feet feel dry and fresh all day.

A heavyweight disguised as a lightweight

Comfort:

- Excellent cushioning and correct height prevents ankle sprain.
- Easy to take on and off with laces, zipper on the side and loop on the heel
- Lightweight

Safety:

- Electric isolating special sole up to 18,000 Volt
- Highest protective level against welding angle grinding
- Very good grip and slip resistant properties

Protection against high voltage makes Lithium an excellent choice also for people working on railroads or other environments with live electricity. Fully covering coat and intelligent seam solutions prevent melted metal, cement, oil and spillage from attaching to the shoes, and it is easy to rinse the shoes without damaging the zipper and shoe laces.

MOLTEN METAL BOOT LITHIUM SB

0-5203-112-10

Comfortable boots that provide excellent protection against high temperatures and melted metal. Isolation against electricity of up to 18,000V and heat-protective thread in the seams. Coat that covers front laces and side zip with soft protection above the instep.

LEOPARD

High quality collection from the German brand Leopard. The models come with a specially developed and designed sole from MegaStampi. The broad sole is made of very soft PU and has an asymmetrical aluminium toe cap. Altogether, this provides for very comfortable shoes for those who need ergonomic models.

The collection consists of two shoes and one pair of ankle boots with the latest sole technology from Desma MSI, which includes additional cushioning material. The broad soles are made of very soft PU and have an asymmetrical aluminium toe cap, which make the models roomy and comfortable.

For those in need of extra large sizes, we have models in the Leopard collection that go up to size 54. If you need these large sizes, contact us.

Quality, comfort and safety since 1916.
The Jalas collection is sporty and the shoes
could easily be mistaken for casual shoes.
However, the models have been created
with the utmost thought on safety, quality
and comfort. Some of Jalas' models are also
available in sizes up to 50.

FOOTWEAR MAINTENANCE

Dirt and humidity has little effect on maintained footwear. Proper maintenance is therefore important to keep comfort and extend durability. The footwear must stay clean, dry and neat over time. Here are some tips for taking care of your footwear:

WASHABLE SHOES UP TO 40 DEGREES

Shoes with this label are machine washable up to 40 degrees.

CLEANING

The upper can be easily cleaned with a shoe brush or a damp cloth. Very dirty footwear can be washed in lukewarm soapy water and rinsed.

DRYING

Never dry the footwear close to a heating source, such as radiators and heating cabinets. The leather dries out, turns hard and can crack. For better ventilation, take out the insole and open the tongue.

LEATHER TREATMENT

Leather footwear should be polished with shoe cream, ideally followed by spray impregnation.

TEXTILE TREATMENT

Textile footwear should be impregnated with spray impregnation. Do not use products that contain fat or oils, as it reduces the breathing capabilities of the fabric. When breathability is reduced, the feet can become clammy and feel less comfortable.

SIZE GUIDE – WENAAS SHOES

1 Place a piece of paper on the floor – from the wall outwards.

2 Place one foot on the piece of paper with the heel pressed against the wall and mark the longest part of the foot on the piece of paper.

Do the same with the other foot. If there is a difference, use the longest measurement of the foot.

3 Measure with a ruler from the edge of the piece of paper to the line.

The length of the foot + overmeasure = length in mm as stated in the table. It means that if the foot is 282 mm long + 10 mm, you need a size 45.

EU	UK	US Men	US Women	mm
35	2,5	3	4	225
36	3	4	5	232
37	4	4,5	5,5	239
38	5	5	6	245
39	6	6	7	252
40	6,5	7	8	260
41	7	8	9	267
42	8	8,5	9,5	271
43	9	9	10	279
44	10	10	11	286
45	10,5	11	12	292
46	11	11,5	12,5	298
47	12	12	13	305
48	13	13	14	312

Symbol description

WENAAS SYMBOLS	EN-SYMBOL	DEFINITION
		Protective toe cap
	SC	Scuff cap – Abrasion test: 8000 repetitions with P180 paper
	LG	Ladder grip – defined heel at min. 1,5 mm.
	FO	Oil-withstanding outer sole
	E	Energy absorption in heel
	A	Anti-static footwear
	WRU	Water-repellant upper
	WPA	Water-repellant upper
	P	Nail-protection
	PL	Nail-protection ≥ 1100 Newton 4,5 mm nail
	PS	Nail-protection ≥1100 Newton 3,0 mm nail
	C	Electrical leading outer sole *
	HI	Heat-isolating footwear *
	CI	Cold-isolating footwear *
	WR	Water-proof footwear *
	M	Metatarsal protection *
	AN	Ankle protection *
	CR	Cut-protecting upper *
	HRO	Heat-resistant outer sole *
	SR	Anti-glide properties. Heel forward - forefoot backwards on ceramic tile with glycerin **
	SRA	Anti-glide tested on ceramic tiles with NLS (special soap solution) **
	SRB	Anti-glide tested on steel floor with glyserine **
	SRC	SRA + SRB **
		ESD
		Electrical isolation

* = Additional requirements for special properties with pertaining symbols for certification

** = The values in the table correspond to the minimum coefficient for anti-glide
